The production process of the 20 drawers tool cabinet:

▶ Cutting the sheet metal: First, the cold-rolled steel needs to be cut to the proper size for making the various parts of the tool cabinet.

▶ Bending and welding: Next, the sheet metal needs to be bent and welded into the frame and drawers of the tool cabinet. This often requires the use of specialized machines and equipment, such as bending machines and welding machines.

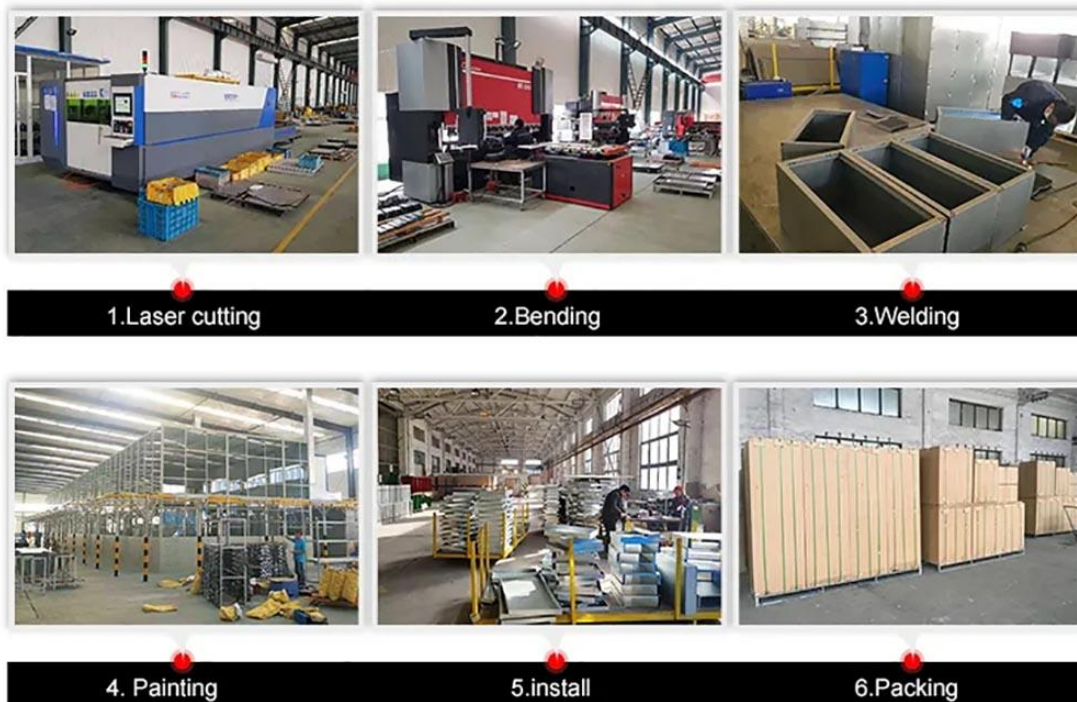

▶ Finishing: Once the frame and drawers are finished, they need to be finished. This may include cleaning, sanding and painting to prevent corrosion and improve exterior quality.

▶ Installing accessories: Once the surface treatment is completed, slide rails, handles and other accessories need to be installed to allow the drawer to open and close smoothly and increase the aesthetics.

▶ Quality inspection: Finally, a comprehensive quality inspection is required on the tool cabinet to ensure that its quality is up to standard and that it can meet the needs of consumers.
